

IN THE CLAIMS:

Please cancel Claim 57 without prejudice or disclaimer of subject matter,
and amend Claims 39, 47 to 49, 51 to 53, 55, 56 and 58 as follows:

1. to 38. (Cancelled)

39. (Currently Amended) A reception apparatus, comprising:

a) reception means for receiving a television signal;

b) input means for entering first program information data and second
program information data which indicate information relating to a same program;

c) designation means for designating desired program information from said
first program information data and said second program information data entered by said
input means;

d) integration means for ~~integrating said first program information data and
said second program information data entered by said input means; producing integrated
program information data by extracting program data from said second program
information data and complementing said first program information data with said
extracted program data,~~ based on the desired program information designated by said
designation means; and

e) display means for displaying ~~said first program information data and said
second program information data integrated by said integration means~~ said integrated
program information data in a display frame.

40. to 44. (Cancelled)

45. (Original) An apparatus according to claim 39, wherein said second program information data are detailed information data indicating the detailed information of said program.

46. (Original) An apparatus according to claim 45, wherein said second program information data include at least one of a representative scene of said program, a text explaining the outline of said program, name of an acting person, title of a music and a classification of said program.

47. (Currently Amended) An apparatus according to claim 39, further comprising:

instruction means for instructing ~~an integrating~~ a producing operation by said integration means; and

input control means for controlling said input means in such a manner as to enter said second program information data in response to the instruction by said instruction means.

48. (Currently Amended) An apparatus according to claim 47, further comprising:

setting means for setting a range of the ~~integrating~~ producing operation by said integration means;

wherein said input control means is adapted to control input means in such a manner as to enter said second program information data corresponding to the range set by said setting means.

49. (Currently Amended) An apparatus according to claim 39, further comprising:

instruction means for instructing ~~an integration~~ a producing operation by said integration means; and

setting means for setting a range of the ~~integrating~~ producing operation by said integration means;

wherein said integration means is adapted to ~~integrate~~ produce said ~~first integrated~~ program information data ~~and said second program information data~~ corresponding to the range set by said setting means.

50. (Original) An apparatus according to claim 49, wherein said setting means is adapted to set at least one of a time zone, a channel and a program.

51. (Currently Amended) An apparatus according to claim 39, wherein said integration means is adapted to ~~integrate~~ produce said ~~first integrated~~ program information data ~~and said second program information data~~ in a time zone close to the current time.

52. (Currently Amended) An apparatus according to claim 39, wherein said integration means is adapted to integrate produce said first integrated program information data ~~and said second program information data~~ relating to a currently observed program.

53. (Currently Amended) An apparatus according to claim 39, further comprising:

designation means for designating a range of the integrating producing operation by said integration means within the information relating to said first program information data and display by said display means;

wherein said integration means is adapted to integrate produce said first integrated program information data ~~and said second program information data~~ according to the designation by said designation means.

54. (Previously Presented) An apparatus according to claim 39, wherein said designation means is adapted to designate at least one of a time zone, a channel and a program.

55. (Currently Amended) An apparatus according to claim 54, wherein said integration means is adapted to integrate produce said first integrated program information data ~~and said second program information data~~; in such a manner as to display program information integrating said first and second program information data in a

display frame for displaying the information relating to said first program information data and corresponding to the range designated by said designation means.

56. (Currently Amended) An apparatus according to claim 54, wherein said integration means is adapted to expand a display frame for displaying the information relating to said first program information data and corresponding to the range designated by said designation means, and to ~~integrate~~ produce said ~~first~~ integrated program information data ~~and said second program information data~~ in such a manner as to display program information integrating said first and second program information data in said expanded display frame.

57. (Cancelled)

58. (Currently Amended) An apparatus according to claim 39, further comprising:

search condition setting means for setting a search condition;

wherein said integration means is adapted to execute search in said second program information data according to the search condition set by said search condition setting means, and to ~~integrate~~ produce the ~~second~~ integrated program information data ~~of~~ based on the result of said search ~~with said first program information data~~.

59. (Original) An apparatus according to claim 58, wherein said search condition includes for example name of an acting person, title of a music, title of program, a classification of program etc.

60. to 64. (Cancelled)

65. (Previously Presented) An apparatus according to Claim 39, wherein said first program information data and said second program information data are input by a same broadcast system.
